

Seriously need to disable CTRL+N= New document

Escrito por HarryJenkins - 27/03/2018 11:35

Hello.

I've found some information on this forum before, but none of it seems to have helped me out. I use Open Office (Writer specifically) quite a bit and I am often going between bolding and unbolding using CTRL+B. However, sometimes my fat fingers hit N instead of B and a new document opens and I have to get out of typing to close the document and it has been annoying me to no end.

Please help.

I didn't find the right solution from the Internet.
